

# Spot leaks - fast!

Aerovac Systems Ltd have developed a new in-line Ball Flow Meter which provides instant warning of leaks during any type of composite vaccum bagging operation. The new meter detects if there is any air flow within the sealed bagging film or membrane, which causes a captive ball to levitate inside a conical tube, providing a highly visible leak indication.

#### *Main features of the meter include:*

- **Ultra-durable carbon fibre casing for extended performance life**
- **Light weight**
- **Suitable for use with bagging film, rubber membrane and infusion moulding lay-ups**
- **The simplest, most cost effective leak detector available**

#### *For full details contact*
