

CONSUMABLE KITS

Aerovac can now save customers time, materials and money by providing cut piece, processing material kits designed for individual applications.

These kits can contain the full range of breather, release film, bagging film and peel ply materials to enable the complete production of specific composite components. Alternatively, individual consumable materials can be cut to customer specifications.

This new service allows on-line readiness, reduced stock holding and material usage, whilst ensuring precise consistency of cut shapes.

BENEFITS

- Enhances Aerovac's LEAN approach to strategic partnerships.
- Eliminates wastage or incorrect selection of processing materials.
- Totally bespoke processing materials packages enable individual requirements to be precisely met.
- Virtually any shape available in any material.
- All data can be stored for retrieval at any time.
- Accurate to within +/- 0.076cm (0.030 inch).

FEATURES

- 7.5 metre length cutting table.
- Porous table surface allows material to be held down by vacuum for extreme cutting accuracy.
- Computer-guided cutting head is controlled by Industrial Nesting Software for maximum productivity with minimal wastage.
- Fully AutoCAD compatible.
- Integral printer enables cut pieces to be marked with specification references.
